

Sample the Stain Before You Buy

Proper sampling is where it starts. Sampling is critical because the same stain can look very different on various species of wood. Different preparation and application methods also affect the final result. Sampling is the only way to make sure you get the color you want the first time.

Sampling is easy: on a small, inconspicuous test area (we recommend a minimum 2 sq. ft. space), simply do each step the way you will on all your logs.

- Prepare the wood.
- Apply the stain the same way you plan to apply it to the rest of the home.
- Let the stain dry (both between coats and after all coats have been applied).
- If working with a contractor, don't allow the contractor to stain until you have thoroughly discussed and demonstrated the look you want. Show him/her the sample.
- Don't stain all of the logs before you verify that you're achieving the look you want. It is best if you can be on-site during the staining process.

For more information on proper preparation and application methods, visit our website at www.sashco.com or scan the Tag on this brochure to access it from your smart phone or tablet.

Capture Log Stain brings your logs alive as it enhances the unique character of the wood grain.

Capture the Timeless Beauty of Natural Grain.

Natural

Hazelnut

Wheat

Sequoia

Bronze Pine

Chestnut

Autumn Aspen

Driftwood

These color samples show two coats of Capture Log Stain and one coat of Cascade, applied by brush on white pine. The color may vary based on the species, texture and porosity of wood, as well as the application technique. Test the stain on an inconspicuous area to make sure you get the color you want.

Great Durability & Easy Maintenance

“A Better Way to Stain”

“A Better Way to Stain”

Reality Check

When applied incorrectly, a high quality stain will give you the same results as a low quality stain.

At Sashco, we want to help you avoid that pitfall. Sashco's Capture & Cascade staining system is the quality product you're looking for, bundled with the support and education necessary to do it right the first time. It's what we call “A Better Way to Stain.” The result is beautiful logs you can enjoy for years to come.

Sampling

To get the look you want, sample the stain on your logs.

Prep

Proper prep starts you down the right path.

Application

Proper application of a quality stain ensures long-term performance.

Routine Maintenance

Reduce long-term costs, time and effort.

Note: For detailed preparation, application and maintenance info, visit www.sashco.com

Why Capture® Log Stain?

Features & Benefits

- **Ultra Elastic:** Capture Log Stain is ultra elastic, allowing it to move freely as your logs expand and contract. This means no peeling - just a beautiful stain that really lasts.
- **Great Durability:** Capture Log Stain, with its companion Cascade®, is one of the longest lasting stains in the log home industry.
- **Just for Logs:** Logs experience extreme UV exposure and movement. Not just any stain will do. Capture Log Stain is made specifically to withstand these extremes.
- **Extremely Transparent:** You chose your log home for the natural beauty of wood. Capture Log Stain enhances the natural beauty of wood grain.
- **Easy Water Clean-up:** Since it's water-based, water is all that is necessary to clean up wet stain.
- **Easy Maintenance:** Periodic application of Cascade® clear coat, which can be applied with a simple garden sprayer, extends the life of Capture Log Stain base coat.
